

VISUALISERS

THE GENE VISION RANGE OF VISUALISERS PROVIDE HIGH-QUALITY DISPLAY FOR PRESENTATIONS AND TRAINING

GENEE **vision**[®] 150SD

The Genee Vision 150SD visualiser is a compact and affordable portable/desktop product. Designed to work perfectly with our G-Touch range of interactive touchscreens, our visualisers enable presenters to display objects on an interactive screen, whiteboard or computer to audiences during live presentations.

Visualisers can capture still images and video and, when combined with software such as Genee Toolbar and Genee Spark, enable you to annotate, highlight and draw over the objects and save your annotation as an image or video file.

Key features and benefits

A Visualiser is an extremely flexible teaching and presentation tool allowing presenters, teachers or students to display objects onto an interactive whiteboard, computer or LED touch screen. This means 3D objects, books, worksheets, maps and text can be viewed by a large audience without the need to be copied and distributed.

The Genee Vision 150SD visualiser uses a high-quality CMOS camera mounted to an arm. With a powerful zoom and focus the visualiser can be used to capture still images or video.

Features such as mirror, rotate, split screen, black and white, positive/negative, image freeze and title grab allow you to manipulate objects or text live on screen without affecting the original source.

The Genee Vision range comes with our exclusive Toolbar presentation software and Video Cap for visualiser video, image & screen capture.

VISUALISERS

THE GENE VISION 150SD TAKES SECONDS TO SET UP AND IS CRAMMED WITH USEFUL FEATURES. THE VISUALISER ALLOWS YOU TO CUT YOUR PRESENTATION PREPARATION TIME AND CAPTURE MEDIA, INCLUDING 3D OBJECTS, FOR DISPLAY ON YOUR INTERACTIVE SCREEN.
